

Pharos
 Studio Playtime
 database can be traced using rapid
 search then added to a playlist in the required
 order with drag-and-drop which is faster and more accurate
 than typing. Running order can be changed up to the last minute or individual
 items initiated manually. Externally generated playlists can be imported to server.
 Potential content is first reviewed on a VTR and the in/out points are identified. Selected material is then

How integrated are you?

Programmes and sequences can be traced using any search criteria. Items can be dragged-and-dropped for recording. Full VTR and server control are provided. Change rundown. Instant playout can be initiated using a software-configurable Director's panel. Ideal for touchscreen operation, this panel is set up and touched. Sequences can be traced using rapid search engines and then play.

Have your cake & eat it with Pharos

Absolute reliability, the widest possible control and the ability to grow the system as you expand: a Pharos system is all this and more. Running order can be changed up to the last minute or individual items initiated manually.

Externally generated playlists can be imported. copy to server. Potential content is first reviewed on a VTR and the in/out points are identified.

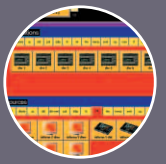

Say goodbye to reliability problems

Absolute reliability, the widest possible control and the ability to grow the system as you expand: a Pharos system is all this and more. Running order can be changed up to the last minute or individual items initiated manually.

Externally generated playlists can be imported. copy to server. Potential content is first reviewed on a VTR and the in/out points are identified.
